**Brief summary of the project**

The project targets, in the first place, the University of Kiremba (Great Lakes), the youth (either enrolled in school or not), the children of the Kiremba orphanage, the teachers, etc. These groups will be able to benefit from ICT training, as well as from a scientific, cultural and moral support. In a second phase, residents living in the surroundings of the centre (women in priority) will be able to benefit from moral support, as well as learn French (and other languages) and initiate themselves to new activities and professions. Finally, the association itself will develop exchanges with other local associations in order to help them with their respective responsibilities towards local populations.
